Cucumber Feature

```
@Angular
Feature: Angular Calculator Protractor Example

@test
    Scenario: Simple Protractor page manipulation
    Given I open angular page url "http://juliemr.github.io/protractor-demo/"
    When I enter "40" into "first"
    And I enter "2" into "second"
    And I evaluate result
    Then I should get "42"
```

Cucumber Feature

Cucumber Code

```
public class AngularCalculator Steps {
        private ProtractorDriver driver;
        @Before("@Angular")
        public void setup() {
                driver = new ProtractorDriver();
                AngularCalculatorPage.setDriver(driver);
       @After("@Angular")
        public void tearDown() {
                driver.quit();
       @Given("^I open angular page url \"(.*)\"$"
        public void I_open_angular_page_url(String url) throws InterruptedException {
                AngularCalculatorPage.isPageDisplayed(url);
```

Karate Feature

```
Feature: Tests for the json placeholder page
Background: Get the home page
   Given url 'https://jsonplaceholder.typicode.com/'
Scenario: Get todo
   Given path 'todos/1'
   When method Get
   Then status 200
   And match response.userId == 1
   And match response.title == '#string'
```
